

I need new CRM Software! Any Suggestions???

We are looking at implementing new CRM Software at our company and I'm on the prowl. Anyone using anything at the moment that's small-to-medium enterprize focussed or know of anything that will possibly do the trick?

With mainstream CRM programs being as powerful as they are, it's been daunting finding a programme that's both user friendly and not too overpowering. Being a smallish concern, we are on the lookout for a CRM system that will allow for dependable usage without breaking the bank. Understandably, some money needs to get spent on implementing a decent system, but alot of what the bigger CRM systems is often overkill for us as a business and something more "lean and mean" would be appropriate...

Please help?!
