

Yoco and Xero launch intergration to enable local SMEs

Yoco, a South African payments company, has announced their integration with Xero, the New Zealand-based cloud accounting software for SMEs. For Yoco merchants who use Xero as their accounting software, this integration means their cash and card sales, VAT, bank account settlements and processing fees will be updated into their Xero account.

The integration is currently being beta tested with a handful of small businesses and will be live on the Xero Add-ons marketplace next month. This integration marks Yoco's second integration with a global tech company.
