

SNC-Lavalin wins ESD contract at Sasol

SNC-Lavalin has been awarded a R3,3m contract for a detail engineering package for an emergency shutdown (ESD) system replacement for Sasol Group Technology in Secunda.

The scope of work includes detail control & instrumentation and electrical engineering package design for the replacement of the existing obsolete conlog relay technology ESD systems at Sasol Refinery West Unit 29, 33 and 34 with a new emergency system. This involves the verification of the basic design, detailed engineering for the new ESD system, including factory acceptance testing support, as well as construction support.

“This is our first opportunity to execute the detail design of an emergency shutdown system, this gives us an opportunity to showcase our engineering expertise and capabilities, while ensuring that we deliver exceptional service on time and within budget” said Stuart Kent, general manager, SNC-Lavalin, sub-Saharan Africa.
